

**WHY
BALANCING?**

BALANCING IS IMPORTANT!

■ *More safety*

- Shorter breaking distance
- Optimal function of ABS & ESP

„Balancing wheels“

= Correcting an imbalance on the wheel counterweights, eliminate the uneven distribution of the balancing weights and enable the wheel to run smoothly.

■ *More driving comfort*

- No vibrations on the steering wheel & in the passenger compartment
- Less physical stress on the body

■ *Less costs*

- Longer tire life due to reduced wear
- Reduced load on wheel balancings and suspension

EXPERT'S OPINION

„When fitting new wheels, but also when changing the old ones every six months, wheel balancing is an indispensable part of proper and professional tire fitting.“ (DEKRA, 2018)
